

ARRIVAL

Target: airbnb wifi sign with qr code

The Scannable Wi-Fi Auto-Connect Frame

An Airbnb Wi-Fi sign with a QR code is a printable visual asset that allows guests to automatically connect to secure networks by scanning the graphic with their smartphone camera.

✓ **Host Benefit:** Deploying these high-contrast signs in high-visibility areas eliminates repetitive technical support questions and manual password entry errors entirely.

4-Step Generation Workflow

1

Input SSID & Password

Gather your exact network name (SSID) and the secure password. Ensure capitalization and special characters are 100% correct to avoid QR code failure.

2

Generate Scannable QR Code

Open the HostFiler Wi-Fi Sign Builder and input your variables. The system will automatically encode the credentials into an Apple/Android compatible QR format.

3

Print & Frame

Download the generated PDF. Print on high-quality 80lb cardstock to prevent ink bleed, and place inside a minimal acrylic or wooden frame (5x7 is optimal).

4

High-Visibility Placement

Do not hide the sign. Position it in an immediate arrival zone where guests drop their bags, such as the entryway console table or the kitchen island.

Placement Strategy Matrix

LOCATION	VISIBILITY RATING	WHY IT WORKS
Entryway Console	OPTIMAL	Guests immediately see it when dropping keys and luggage.
Kitchen Island	OPTIMAL	Central hub where guests gather in the first 5 minutes.
Living Room Coffee Table	SECONDARY	Good for TV setup, but can be obscured by magazines or remotes.
Inside Welcome Book	SUB-OPTIMAL	Requires physical interaction to find; guests will text you first.
